Focus on the centre position; since the number there gets added to every other number is some combination or other. We can't use a, because adding it to 8 and another number would over shoot the target sum at 15.

By the same logic, we can disqualify 8, 7 and 6. We can also eliminate 1, 2, 3, and 4 as too small to make sums of 15 in all directions. When we realize that only 5 will fill the bill for the center position, we can quickly figure out the rest. 6, 18
